Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1-4, 7-10 and 12-15 are rejected under 35 U.S.C. 102(e) as being anticipated by Chun. Chun shows the use of a wheeled chair having a clothes hanger (9) comprising: a chair back (10) provided with a height-adjusting device, a cushion device and a clothes hanger (9) for hanging clothes and adjusting the height of the clothes hanger; a chair seat (7) connected with the chair back using a fixing frame; and a stand connected to the chair seat using a tubular axle (see Fig. 6). The fixing frame is L-shaped so that the back side of the chair is attached to the vertical section of the fixing frame and the fixing frame is provided with a plurality of screwed holes, the number of the screwed holes being odd. 4. A right top lateral side and a left top lateral side of the fixing frame are each provided with a retaining base (51); wherein each of the retaining bases is provided with a through hole for receiving a corresponding arm of a U-shaped adjusting frame (6) so that the adjusting frame is capable of moving vertically along the retaining bases. Chun shows a cushion device comprises a button (3), a tenon tongue (31), a spring (2) and a mounting box (11).

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 5-6 and 11 are rejected under 35 U.S.C. 103(a) as being unpatentable over Chen in view of Elzenbeck. Chen shows all of the teachings of the claimed invention except the use of a cushioning butterfly plate (28), resistant block (50) and a pull resistant indentation. Elzenbeck shows the use of a cushioning butterfly plate (28) having a resistant block (50) located underneath thereof. Elzenbeck further shows the use of a pull resistant indentation (52) mounted on the bottom of a U shaped frame. It would have been obvious to one of ordinary skill in the art at the time of the invention to modify the fixed frame and U shaped frame, with the teachings of Elzenbeck in order to prevent inadvertent displacement of the hanger position.

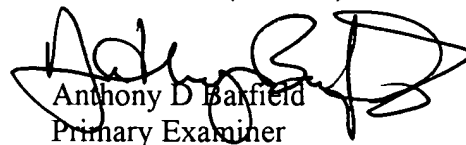

Conclusion

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Reference Nos. 2003/0184134 shows features of the claimed invention.
